The 2001/2002 Highway Inventory Summaries

The summaries for 2001/2002 are based on the map distance from the GIS base map and the new highway referencing system. The difference in distances from the previous years is less than 0.5%, and is more accurate than the previous methods of measurement (ie. scaling from plans and maps).

All summaries are based on the 2001 Highway Inventory and are current as of December 31, 2001. Section and route distances are included.

Section Distance – Sum of all section lengths of a specific highway number in each region. For divided highways this includes both directions.
Undivided, ahead and back directions

Route Distance – Sum of all route lengths for a specific highway number in each region. For divided highways the route length (nominal highway distance) is based on the primary control line.
Ahead and undivided directions only.

All section distances are identified in the shaded areas and route distances are in white.
